Italian · native

English · working language

PROFILE

Full stack developer from Nola, Italy, working professionally since 2021. I build mobile apps, web applications and backends, from the cloud to the store. At work I develop vertical products for Arca Evolution, Wolters Kluwer's ERP; as sole developer I built Dhonko, a group travel platform, from infrastructure to app. I use AI assistants when developing: I define the requirements and the architecture, and I review the code they produce.

EXPERIENCE

Full Stack Developer

Oct 2022 – today

Promedya S.r.l. · a Wolters Kluwer agency

A team of three customising Arca Evolution. Vertical products designed and built with the team:

- **Smart Server** (Java, Spring Boot): a *stateful* API that takes the customer's logic (customer records, documents, accounting) out of the ERP without accessing SQL Server directly.
- **Smart Agenti** and **Smart Tentata Vendita** (Flutter): the ERP in the sales agent's pocket, with offline sync, and van sales with delivery notes and invoices.
- **Smart Logistica** and **automatic data imports** (Next.js): warehouse with batches, stock levels and transactions; PDF, Excel, TXT and JSON files turned into ERP documents.
- **Smart @MAIL** (NestJS): automatic payment reminders and administrative messages driven by rules; **Cashmatic integration** (NestJS) with an automatic cash machine, certified.
- **Smart BI** (Syncfusion); contributions to **Smart Produzione** and **Smart B2B** (Stripe payments).

Sole developer

2023 – today

Dhonko · client project

- A group travel platform, built single-handedly in every part: infrastructure, backend, web and apps. From the 2023 Flutter app to a single TypeScript codebase with **Next.js**, **NestJS**, **PostgreSQL** and **Capacitor**.
- Stripe payments (idempotent webhooks, a ledger of movements, automatic reconciliation), group bookings with held seats, real-time chat with translation, a back office and seven languages.
- Launching on 12 December 2026.

EDUCATION

Computer Science diploma, 96/100
I.T.C.S.G. Masullo – Theti, Nola
2015 – 2021

Java Enterprise and Clean Code course
Matrix Consulting / Oracle Academy, organised by Accenture
2022

CERTIFICATIONS

Meta · Coding Interview Preparation (2025)

Meta · React and JavaScript Programming (2025)

Oracle · Java and Vaadin

Member of the Apple Developer Program and the Google Developer Program.

EXPERIENCE

Full Stack Developer

May – Oct 2022

Accenture Italia

- The italia.it portal with **Adobe Experience Manager** and **Java Spring MVC** microservices.
- Authentication and authorisation: **JWT**, **OAuth** providers (GitHub, Google, Apple), login with **SPID** and **CIE** (Italian digital identity).
- A proxy that rewrites requests to the backend and masks internal addresses; other applications in **React**.

App Developer

Sep 2021 – Feb 2022

Jotto S.r.l.

- **Jotto+**, a home automation app in **Flutter** (Google Play and App Store): device setup, thermostat, weekly scheduler, charts, iPad adaptation.
- Native **Swift** and **Kotlin** code for local communication over Bluetooth LE and WiFi.

PERSONAL PROJECTS

- **Bandierina**: an amateur football app (prototype), with brackets described by data and five tournament formats.
- **amalia**: a social platform for developers with coding challenges generated and graded by an AI (built with AI assistance).
- **GigliGame**: a simulation of the Festa dei Gigli of Nola in Unreal Engine 5 with C++, conceived and directed by me and built with AI assistance.
- **Hack&Blast²** (Caserta, May 2025): took part with CASERTA, a concept of AI agents.
